

# Forecast of Potential CBC/SRC Radio Advertising Revenues 

## Introduction

1. CMRI was commissioned by the Friends of Canadian Broadcasting to forecast potential advertising revenues of the four main radio services of CBC/Radio Canada. CBC has requested that its licences be changed to allow advertising on its Radio 2 and Espace Musique channels and could in future years seek the same for its other two radio services. This brief report describes the methodology used to make this forecast as well as the results. Barry Kiefl prepared the report and his qualifications are set out in Schedule 1.

## The Methodology

2. All of the data used in this analysis come from the CRTC's Monitoring Report, which has become an invaluable tool for understanding the Canadian broadcasting system and projecting the effects of changes in the system.
3. The latest CRTC revenue data at the time of the analysis for the private radio industry were obtained from the 2011 CRTC's Monitoring Report. All but a tiny percentage of private radio revenue comes from advertising, thus these data are an excellent surrogate for private radio ad revenues.
4. CMRI then obtained the CRTC's analysis of audience listening hours and audience share of CBC and major private radio station groups from the CRTC's Monitoring Report. For the purposes of this high-level analysis audience data from diary and PPM markets in 2010 were combined, as was the revenue from diary and meter markets.
5. The revenue and audience data were then used to calculate the revenue generated per listening hour of all major English and French radio groups in 2010. This revenue index has been used by CMRI many times in the past and been published in industry periodicals such as Marketing Magazine ${ }^{1}$. The revenue per listening hour is a robust modeling instrument because it accounts for such factors as varying sell-out ratios, small-medium-large market variations and the index also averages differences in audience demographics across stations. Most importantly, the index encompasses natural supply and demand forces in the advertising marketplace. However, because there are significant differences in English and French language ad rates, English and French markets were analyzed separately.
6. CMRI then averaged the revenue per listening hour in private radio and using this average projected potential revenues of $\mathrm{CBC} /$ Radio Canada listening hours in 2013-2015.
7. Since there will likely be self-imposed restrictions on the amount and type of advertising CBC would sell and because CBC's audience skews older and is

[^0]considered not as valuable to advertisers, it was assumed that CBC would generate only $60 \%$ of the private sector average revenue per hour. It was assumed that CBC would improve its sales by $10 \%$ in the second and third year, bringing it closer to the private industry average. CMRI looked at various scenarios but believes that ads sales at $60 \%$ of the average private station is a reasonable expectation, perhaps conservative. If CBC maintains its current audience levels, after two or three years CBC would likely sell its audience near the industry average.
8. CMRI estimated total radio ad revenues in 2013 would be $2 \%$ higher than in 2010 and assumed an annual increase of $2 \%$ in 2014 and 2015 and from this base calculated the impact of CBC commercialization on private radio groups, assuming that CBC revenues would be virtually all at the expense of private radio.

## The Analysis and Results

9. The table below is taken from the 2011 CRTC Monitoring Report and shows the revenue of all major private radio station groups and total revenues for all English and French private radio in the years 2008 to 2010:

From CRTC Monitoring Report 2011:
Table 4.2.9 English-language, and French-language radio revenues and number of undertakings reporting for the largest radio operators in Canada

| Corporation | Revenues (\$ thousands) |  |  | Number of radio undertakings reporting |  |  | Share of national revenue |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 2008 | 2009 | 2010 | 2008 | 2009 | 2010 | 2008 | 2009 | 2010 |
| Largest private radio operators |  |  |  |  |  |  |  |  |  |

| BCE4 | 172,131 | 161,960 | 161,157 | 34 | 34 | 34 | 13\% | 13\% | 13\% |
| Newcap5 | 95,785 | 96,452 | 104,677 | 61 | 62 | 59 | 7\% | 8\% | 8\% |
| Total English-language largest private | 944,808 | 870,051 | 879,528 | 245 | 249 | 246 | 72\% | 71\% | 69\% |
| Total English-language private radio | 1,316,430 | 1,230,398 | 1,258,737 | 514 | 525 | 536 | 100\% | 100\% | 100\% |
| Largest French-language radio corporations |  |  |  |  |  |  |  |  |  |
| Astral | 107,312 | 108,448 | 109,726 | 21 | 21 | 21 | 47\% | 45\% | 44\% |
| Corus2 | 49,118 | 50,446 | 55,478 | 12 | 12 | 12 | 21\% | 21\% | 22\% |
| Cogeco | 33,174 | 36,280 | 41,780 | 5 | 5 | 5 | 14\% | 15\% | 17\% |
| Total French-language largest private | 189,604 | 195,174 | 206,984 | 38 | 38 | 38 | 82\% | 82\% | 82\% |
| Total French-language private radio | 237,924 | 238,396 | 251,139 | 97 | 99 | 96 | 100\% | 100\% | 100\% |

10. As shown in the table total private radio revenues have hovered around $\$ 1.5-$ $\$ 1.6$ billion in recent years, the majority of which comes from English private radio ( $\$ 1.2-\$ 1.3$ billion). The annual revenue of the station groups in Table 4.2.9 is the numerator used in the calculation of the revenue index.
11. The table below shows the average weekly listening hours for the same years 2008 to 2010 for all major English and French private radio station groups, as per CRTC's analysis in the 2011 CRTC Monitoring Report. CMRI added the final column combining the PPM/diary data, which reveals that listening hours of all station groups declined somewhat with the introduction of the PPM:

## From CRTC Monitoring Report 2011:

Table 4.2.6 Fall tuning achieved by largest English- and French-language private commercial radio operators in Canada

| Listening hours (thousands) per Corporation | 2008 | 2009 | 2010 |  | 2010 |
| :---: | :---: | :---: | :---: | :---: | :---: |

| Rogers | 46,053 | 49,513 | 21,888 | 19,091 | 40,979 |
| Share | 20\% | 22\% | 23\% | 20\% |  |
| Total listening hours for largest private English commercial operators | 229,365 | 226,281 | 94,862 | 94,541 | 189,403 |
|  | 100\% | 100\% | 100\% | 100\% |  |
| Largest Canadian French-language radio operators |  |  |  |  |  |
| Astral | 31,876 | 30,833 | 9,373 | 17,353 | 26,726 |
| Share | 47\% | 46\% | 32\% | 63\% |  |
| Cogeco | 13,027 | 13,175 | 7,359 | 3,816 | 11,175 |
| Share | 19\% | 20\% | 25\% | 14\% |  |
| Corus | 23,078 | 22,621 | 12,868 | 6,450 | 19,318 |
| Share | 34\% | 34\% | 43\% | 23\% |  |
|  | 67,981 | 66,629 | 29,600 | 27,619 | 57,219 |
| Total listening hours for largest private French commercial operators | 100\% | 100\% | 100\% | 100\% |  |

12. The average weekly listening hours shown in the Table 4.2 .6 above is the denominator used in the calculation of the revenue index, as explained below. The revenue index reveals how much a station sells its audience for in any given year.
13. The next step in the forecasting exercise was to calculate the revenue index, i.e., the revenue generated per thousand listening hours of all major English and French radio groups in 2008 to 2010, which is shown below. The index is the revenue of a given station group divided by the listening hours of that group:

CMRI Estimate:

| Corporation | Revenue/Listening Hour |  |  |
| :---: | :---: | :---: | :---: |
|  | 2008 | 2009 | 2010 |
| Largest English-language radio operators |  |  |  |
| Astral1 | \$3.64 | \$3.55 | \$4.36 |
| Rogers3 | \$5.25 | \$4.29 | \$4.99 |
| Corus | \$3.60 | \$3.22 | \$4.25 |
| BCE4 | \$4.52 | \$4.39 | \$5.36 |
| Newcap5 | \$3.83 | \$4.37 | \$4.49 |
| Average | \$4.17 | \$3.97 | \$4.69 |
|  |  |  |  |
| Largest French-language radio corporations |  |  |  |
| Astral | \$3.37 | \$3.52 | \$4.11 |
| Corus2 | \$2.13 | \$2.23 | \$2.87 |
| Cogeco | \$2.55 | \$2.75 | \$3.74 |
| Average | \$2.68 | \$2.83 | \$3.57 |
|  |  |  |  |

14. For example, the revenue index for Astral English stations shown above was $\$ 4.36$ in 2010. This was calculated by dividing the Astral revenue in Table 4.2 .9 by the listening hours in Table 4.2.6 (\$216,768/49,748 hours=\$4.36). Put in another way, Astral sold a thousand listening hours for $\$ 4.36$ in 2010.
15. In 2010 English radio stations owned by BCE sold their audience for more than any other station group, $\$ 5.36$, almost twice as much as Corus French stations. Note that both English and French indexes increased in 2010, notably because while the PPM reported lower listening levels in metered markets, all station groups adjusted their rates to make up for lower reported audiences. As well, the effects of the 2008 recession were out of the market by 2010 .
16. Interestingly, the average revenue index for English stations is considerably higher than for French stations in all three years. For example, in 2010 English stations generated $\$ 4.69$ per thousand listening hours vs. $\$ 3.57$ for French stations. The gap between private English and French stations has shrunk since 2008 but it is still significant. Only Astral French stations had an index above $\$ 4.00$ in 2010. Corus French stations had a revenue index of only $\$ 2.87$ that same year. In our forecast of ad revenues we applied the average index of private English radio to CBC Radio audiences. We applied the average of private French station groups to the audiences of Radio Canada radio services. Using the averages we would not exaggerate or underestimate what CBC revenues might be.
17. The final step in the forecast was to take the average revenue index for private radio stations and apply that index to the expected audience of $\mathrm{CBC} /$ Radio Canada. The CRTC Monitoring Report provides a thorough analysis of CBC/Radio Canada radio audiences and all English and French AM and FM stations, which
allows one to calculate the listening hours of CBC radio. The relevant CRTC analyses are shown in an appendix. In our forecast we assumed that CBC audiences would remain unchanged in the years 2013 to 2015, as they have in the past few years, according to CRTC reports. It was also assumed that CBC would be able to adjust its ad rates in metered markets to counter lower reported listening levels, just as private stations have. Differences in diary and PPM data are a minor factor in a high-level analysis such as this and would have little effect on the results (results are essentially the same using only diary data from 2008 and 2009). CMRI estimated total industry ad revenue in 2013 and to account for inflation CMRI estimated revenues would increase at a rate of $2 \%$ in the years 2013 to 2015.
18. As mentioned, CMRI assumed there will be self-imposed restrictions on the amount and type of advertising CBC would sell, at least initially. For this reason and because CBC's audience skews older and is considered not as valuable to advertisers, it was assumed that CBC would generate only $\mathbf{6 0 \%}$ of the private sector average revenue per listening hour. It was assumed that CBC would improve its sales by $10 \%$ in the second and third year, bringing it closer to the private industry average in year three. The results of the forecast are shown in the table below:

## English-language, and French-language radio revenues for CBC and the

 largest radio operators in Canada| Corporation | Projected Radio Revenues <br> Without CBC Ads(\$ <br> thousands) |  | If CBC Radio <br> Commercializes: |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :---: | :---: |
|  | Projected Revenues |  |  |  |  |  |  |  |
|  | 2013 | 2014 | 2015 | 2015 |  |  |  |  |

| Largest English-language radio operators |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Astral1 | 221,103 | 225,525 | 230,036 | 196,561 | 198,688 | 200,361 |
| Rogers3 | 208,438 | 212,607 | 216,859 | 185,301 | 187,307 | 188,884 |
| Corus | 196,427 | 200,355 | 204,362 | 174,623 | 176,513 | 177,999 |
| BCE4 | 164,380 | 167,668 | 171,021 | 146,134 | 147,715 | 148,959 |
| Newcap5 | 106,771 | 108,906 | 111,084 | 94,919 | 95,946 | 96,754 |
| Total English-language largest private | 897,119 | 915,061 | 933,362 | 797,538 | 806,169 | 812,958 |
| Total English-language private radio | 1,283,912 | 1,309,590 | 1,335,782 | 1,141,398 | 1,153,749 | 1,163,466 |
| CBC Radio 1 |  |  |  | 117,970 | 129,767 | 142,744 |
| CBC Radio 2 |  |  |  | 24,226 | 26,649 | 29,313 |
| All English Radio |  |  |  | 1,283,912 | 1,309,590 | 1,335,782 |

Largest French-language radio corporations

| Astral | 111,921 | 114,159 | 116,442 | 94,685 | 95,209 | 95,599 |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
| Corus2 | 56,588 | 57,719 | 58,874 | 47,873 | 48,138 | 48,335 |
| Cogeco | 42,616 | 43,468 | 44,337 | 36,053 | 36,252 | 36,401 |
| Total French-language largest private <br> radio operators | 211,124 | 215,346 | 219,653 | 178,611 | 179,168 | 180,335 |
| Total French-language private radio <br> operators | 256,162 | 261,285 | 266,511 | 216,713 | 217,912 | 218,805 |
| La Premiere Chaine |  |  |  | $\mathbf{3 0 , 1 1 6}$ | $\mathbf{3 3 , 1 2 8}$ | $\mathbf{3 6 , 4 4 1}$ |
| Espace Musique |  |  |  | $\mathbf{9 , 1 9 6}$ | $\mathbf{1 0 , 1 1 5}$ | $\mathbf{1 1 , 1 2 7}$ |
| All French Radio |  |  |  | 256,162 | 261,285 | 266,511 |

19. CMRI estimates that Radio 2, if it sold ads at $60 \%$ of the average English private station, would generate $\mathbf{\$ 2 9 . 3}$ million in ad revenues by year three. Were Radio 1 ever to commercialize as well, it could generate as much as $\$ 142.7$ million in
ad revenues after three years. Espace Musique would generate in the order of \$11.1 million by 2015, while Premiere Chaine, were it to commercialize and sell ads initially at $60 \%$ of the average French private station, could generate as much as $\$ 36.4$ million in year three. CBC radio commands large audiences and therefore commercial revenue would be substantial, not far below the revenues of CBC's main TV networks if it was allowed free rein in the market.
20. The impact of CBC commercialization on private radio groups, assuming that CBC revenues would be almost entirely at the expense of private radio, would be significant. New applicants invariably make the argument that they will expand the market and attract new advertisers but there is little proof of this in past experience. Specialty channels in TV, for example, have not only taken audience away from conventional networks, they have taken ad revenues as well ${ }^{2}$. CBC radio already has a large audience and CMRI estimates that by 2015 English private radio stations would lose as much as $\$ 172$ million if CBC Radio 1 and 2 were to commercialize and French private radio stations would suffer loses as much as $\$ 47$ million if both Radio Canada radio services were to commercialize.

Barry Kiefl,<br>President, CMRI<br>November 27, 2012

## Schedule 1

## Barry Kiefl

Barry Kiefl is the president of Canadian Media Research Inc. (CMRI), an independent research company, established in 2001. Mr. Kiefl was Research Director for the CBC from 1983-2001. While with the CBC, he was responsible for all research services for CBC English and French radio and TV, which established the successful strategies of CBC/Radio Canada in the 1980's and 90's. He has written numerous articles and spoken at many professional research conferences on the issues surrounding audience research and the electronic media. He has conducted research for the CRTC, including a review of international trends in TV, a study of cable/DTH penetration vs. over-the-air television viewing and a study defining the meaning of 'audience success'. He has been a speaker at the annual conventions of the Canadian Association of Broadcasters, the Canadian Cable Television Association, the Law Society of Upper Canada, BBM's Annual Staying Tuned Conferences, the Advertising Research Foundation, the Professional Market Research Society and the Canadian Satellite Users' Association. Mr. Kiefl has been an expert witness in patent cases and has testified before the Copyright Board and other regulatory bodies.

Mr. Kiefl is an expert in all audience research methodologies, including surveys, market trials, content analyses, field experiments, focus groups and 'diary' and 'people meter' audience measurement systems. He was granted a patent for a PPM-like TV/radio audience measurement system by the U.S. Patent Office in 1995. The patent included the use of cellular technology to wirelessly collect research data. He has represented Canada on a number of international research projects, including the EBU's "Toward Global Guidelines for Television Audience Research," 1999, which he co-authored. He was Technical Research Director of the Canadian Advertising Research Foundation from 1994-1999 and authored CARF's "Research Guidelines for the Electronic Media in Canada," March 1997. He has been a member of the BBM Board of Directors and Nielsen's Advisory Board.

[^0]:    ${ }^{11}$ See, for example, "MuchCheaper," by Barry Kiefl, Marketing Magazine, June 20, 2005.

[^1]:    ${ }^{2}$ TVB data show that TV's share of ad revenue is smaller today than 10 years ago. TV has faced new competitors, especially the internet, which offsets efforts to grow the market:
